

## ***ECO-AE-1Z-STND***

### ***Revit Model Features***

The following model codes are included in this Revit family:

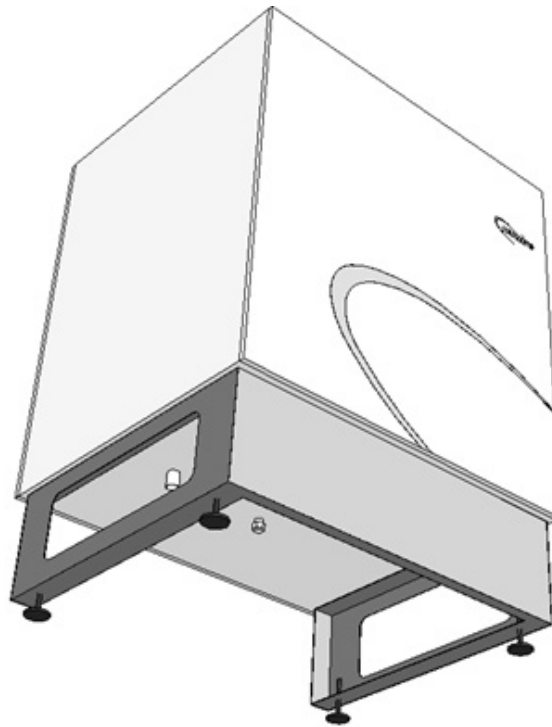

ECO3-AE-1Z-STND  
ECO4-AE-1Z-STND  
ECO5-AE-1Z-STND

These are for use with the Acoustic Enclosure (AE) and 1Z variants of the MRXBOX heat recovery units. These are not suitable for use with the standard unit.

The different codes are selectable from the properties window once the model has been inserted into the project.

1. Please simply align the centre planes of the stand to those of the MRXBOX unit in your project. The solid panel on the stand faces the front of the unit as below:

Continued on next page...

2. The '**Adjustable Height**' parameter, found in the properties window, will adjust the unit mounting height of the stand between the real-life height limits of 393mm - 413mm (ECO3 & ECO5 models) and 234mm - 254mm (ECO4 model).

Model Properties	
Adjustable Height	254.0

Any value outside of these limits will be ignored and the closest permissible value will be used in its place e.g. inputting 150mm will leave the stand at 234mm for the ECO4 model and 393mm for the ECO3 and ECO5 models.
