### Conform to these Building Regulations

#### Extract Ventilation rates – ADF Paragraph 5.1a

| Room                   | Intermittent extract                        |                   | Continuous extract                                       |
|------------------------|---------------------------------------------|-------------------|----------------------------------------------------------|
|                        | Minimum rate                                | Minimum high rate | Minimum low rate                                         |
| Kitchen                | 30 l/s adjacent to hob; or 60 l/s elsewhere | 13 l/s            |                                                          |
| Utility room           | 30 l/s                                      | 8 l/s             | Total extract rate should be at least the whole dwelling |
| Bathroom               | 15 l/s                                      | 8 l/s             |                                                          |
| Sanitary accommodation | 6 l/s                                       | 6 l/s             |                                                          |

*Daily run monitor*

*Adjustable settings to select the correct flow rates for bathrooms or kitchens*

*Dimensions*

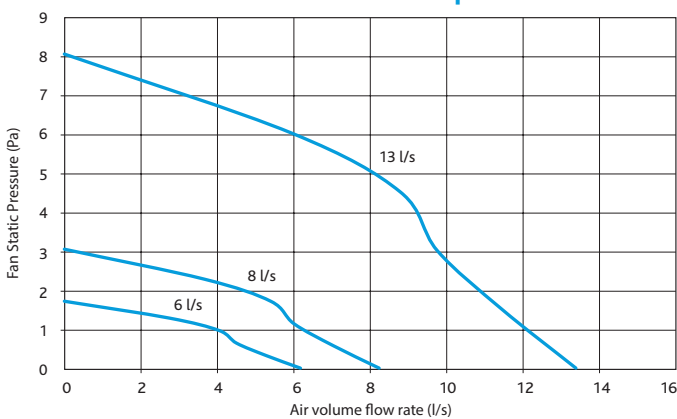

*Continuous or intermittent*

*Optional humidistat tracker*

Patent Pending

#### Continuous Performance Graph

#### Intermittent Performance Graph

Graphs shown above includes 300mm duct and low resistance external wall grille

**Annual running costs on intermittent setting with boost functionality running at 2 hours per day @ £0.13 per kWh are:**

• Bathroom set on 15 l/s = £0.24 • Kitchen set on 60 l/s = £2.85

Running costs for alternative settings are available on request.
