

IAQBOX-S

USER GUIDE FOR OCCUPANTS

Initiatives to ensure our homes have an acceptable standard of indoor air quality have resulted in ventilation becoming an even more important aspect of our day to day lives.

Nuaire's **IAQBOX-S** is an inline filtration system that houses a carbon filter cell which filters out dangerous pollutants such as NO₂ and Carbon Dioxide. The unit sits on the supply leg of the ducting system which serves the 'living' areas of your home, such as bedrooms and sitting rooms.

There are 3 units available within the **IAQBOX-S** range, with the only difference being what filters were supplied at the initial purchase from

the manufacturer Nuaire. A carbon filter cell comes as standard, but the choice of either a **PM10** or **PM2.5** pre-filter is offered. Optional product codes (as cited on the product label of your unit) are as follows: **IAQBOX-S** (standard), **IAQBOX-S-PM10**, **IAQBOX-S-PM2.5**.

The **IAQBOX-S** will have been installed by your housing provider in accordance with the latest building initiatives and as such should be maintained as per best practice recommendations.

How do I operate the unit?

There are no adjustable running functions for the **IAQBOX-S**. As such the unit will function continuously, in addition to the ventilation system that will also be installed.

What maintenance is required?

The only maintenance required is regarding the filters that will need to be replaced. This can be carried out by the occupant, with replacement filters purchasable directly from Nuaire.

The recommended lifespan for the carbon filter cell in this product is approximately 2 years.

If your unit has the **PM10** or **PM2.5** pre-filters, in addition to the carbon filter cell, then Nuaire would recommend the replacement of these pre-filters approximately every 12 months.

All of these filters can be discarded in your standard residential waste disposal.

Alternatively the carbon filter cell can be forwarded on to the manufacturer for re-fill. In this instance please contact Nuaire directly for further information.

Appropriate PPE (Personal Protective Equipment) should be worn during maintenance. Precautions may also be needed to protect the surrounding area from excess carbon residue.

If I need some advice, who do I contact?

In the first instance please contact your housing provider or house builder.

Nuaire have a team of technical experts on hand to help. Our operating hours are 9am to 5pm Monday to Friday (excluding Bank Holidays) contact us on **029 2085 8400** (option 2).

When calling Nuaire, if possible, please check your fan for the serial number located on the fan label.
